DATA STRATEGY AND LEADERSHIP FOR CRITICAL INFRASTRUCTURE, TRANSPORT AND PUBLIC SERVICES

Infin8 Digital

Data you can trust. Decisions you can fund.

We work with the directors about to commit money on data they don't fully trust, from the client's side of the table. Before the platform contract, the programme business case or the senior hire, you get an independent view of where your data really stands. It starts with five days that end in a roadmap of what to fix first, what it is worth, and what to leave alone.

01 DATA STRATEGY AND LEADERSHIP

Data Strategy Health Check

CDOS · CIOS · CFOS · COOS

Five senior days assessing where your data actually stands: direction, structure, skills and platform, measured against DAMA-DMBOK and SFIA aligned frameworks. The final report is shared within ten working days of the start date. From £8,500 fixed, which sits inside most directors' own authority.

Data Platform Decision

CIOS · CDOS · CFOS

A platform choice you can defend now and in three years' time. Criteria locked before any vendor is scored, every option costed on your own usage, and staying put assessed as a viable option. For a renewal date, a vendor pushing a migration, or two data estates after a merger. Delivered in as little as four weeks.

Data Trust Recovery

CFOS · COOS · HEADS OF PERFORMANCE AND REGULATORY REPORTING

Making the figures your executive team sees trustworthy again. Up to six key metrics traced to where they break, fixed at intake, given an owner, and taken off the reconciliation spreadsheet for good. For the regulator meeting on figures nobody fully trusts, or the week the person who reconciles the pack by hand hands in their notice. Eight weeks.

Data Foundations Delivered

CDOS · CIOS · COOS

The foundations an AI programme assumes and hasn't paid for: a short strategy tied to delivery, named owners, a data forum that meets, an architecture on the platform you already have, and one joined-up data product live by week eight. Where the foundations are unknown, the Health Check comes first.

Fractional Data Leadership

CEOS · CFOS · CIOS · COOS

A data leader in post two or three days a week, accountable from day one, building the role a permanent successor inherits and then stepping down. For when the Head of Data has left, or never existed. We help define and assess the permanent role, but we don't run the search or take a fee. Priced monthly, three months minimum.

WHO YOU'LL SPEAK TO

Senior industry practitioners, led by Sam Richmond, co-founder & CEO, with experience leading data, technology and delivery teams for global transport and infrastructure organisations. Sam sits on techUK's Industry Advisory Group to the AI Assurance Consortium.

WHERE WE'VE DONE IT

Transport operators, infrastructure providers and facilities services: analysis, options selection, business case, delivery and data foundations.

HOW TO BUY

Fixed price and flexible options for every service. Public sector clients can appoint us through the SparkDPS, AIDPS and SpaceDM frameworks.
Accreditations: Cyber Essentials, RISQS, JOSCAR.

On this work we take no commission, hold no reseller or partner agreements, and our fee does not change with the recommendation. Where quoted, prices exclude VAT.

AI ARCHITECTURE FOR CRITICAL INFRASTRUCTURE, TRANSPORT AND PUBLIC SERVICES

Infin8 Digital

AI you can govern. Decisions you can defend.

We work for the people accountable for AI decisions in the organisations that run critical infrastructure, transport and public services, from the client's side of the table. The work is led by Adam Fitton, our CTO, whose fifteen years in architecture and IT strategy span rail, buses, councils and universities. We don't sell the platform or the model that follows. We start with five days that end in a short list of blockers somebody can fund.

02 AI ARCHITECTURE

AI Readiness Health Check

CTOS · CISOS · HEADS OF DIGITAL

Five senior days on whether your estate could safely take AI, before the next platform commitment or supplier signature. Data access, architecture, identity, governance, skills and spend, plus a gap register across the policies you already have. The blockers to fix first, and the decisions to defer.

AI Platform and Access Decision

CTOS · CIOS · PROGRAMME SPONSORS

A choice between the options in front of you that you can defend in three years' time: hosted, in-tenancy, embedded, extend what you own, or not yet. Criteria locked before anything is scored, five-year cost at your consumption rather than list price, and the access designed on your side of the boundary. Four weeks, and a decision paper your board can read.

AI Risk Management

CTOS · CISOS · DIRECTORS OF RISK

From a list of risks to a plan with owners, costs and dates, written into your own register in your own taxonomy. Controls tested rather than collected, and mapped to the frameworks you already answer to, such as the NIST AI Risk Management Framework, ISO/IEC 42001, the OECD AI Principles and the OWASP AI Security and Privacy Guide. What you are knowingly accepting is stated in writing. Four weeks, ending in front of your board or audit committee.

AI Process Intelligence

COOS · DIRECTORS OF CUSTOMER OR CORPORATE SERVICES · CTOS

Where AI actually pays, measured rather than workshopped. One process in three weeks, such as reactive work orders or customer contact: volume, cycle and touch time, rework, failure demand, cost per case. Every intervention ranked, including the ones that are not AI at all. We don't run it alongside a live restructure. You keep the measured baseline whatever we conclude.

AI Benefits Realisation

FINANCE DIRECTORS · AUDIT COMMITTEES · BOARDS

Of everything you were promised when the AI investments were approved, what actually landed? Every claim graded on evidence, cashable separated from non-cashable, run cost actual against forecast, and a business case standard so next year's claims can be tested. Released time is never counted as cash. Three weeks, up to twelve investments.

WHO YOU'LL SPEAK TO

Senior practitioners led by Adam Fitton, co-founder & CTO, with experience leading business architecture and systems analysis across transport, government and emergency services. Sam Richmond, CEO, sits on techUK's Industry Advisory Group to the AI Assurance Consortium.

WHERE WE'VE DONE IT

Before Infin8 Digital, Adam designed the technical architecture for a train operating company at Go-Ahead, designed numerous software solutions, and ran project assurance on Haringey Council's major IT projects.

HOW TO BUY

Fixed price and flexible options for every service. Public sector clients can appoint us through the SparkDPS, AIDPS and SpaceDM frameworks.
Accreditations: Cyber Essentials, RISQS, JOSCAR.

On this work we take no commission, hold no reseller or partner agreements, and our fee does not change with the recommendation. Where quoted, prices exclude VAT.

PROGRAMME AND ASSET ADVISORY FOR CRITICAL INFRASTRUCTURE, TRANSPORT AND PUBLIC SERVICES

Infin8 Digital

Know what you're building. Decisions that hold.

We work for the people accountable for programmes and asset systems in rail, utilities and the other organisations that run critical infrastructure, transport and public services, from the client's side of the table. The work is led by Mike Brown CEng MICE, our COO, who has led delivery from the client side on national programmes at Network Rail. We start small, with a scope that has a number on it.

03 PROGRAMMES AND ASSET SYSTEMS

Initiation and discovery

PROGRAMME SPONSORS · SROS · HEADS OF ASSET STRATEGY

Working out what a programme actually is before the money commits: the scope, the approvals between a decision and a build, and the conditions under which the answer is not yet. For a business case in development, funding approved with nothing mobilised, or a previous attempt that came apart. It ends in a scope with a number on it that you can take to whoever holds the budget.

Asset Systems & Decision

ASSET DIRECTORS · IT DIRECTORS · HEADS OF MAINTENANCE

The full cycle when an asset system reaches end of life or a support contract runs out: requirements, option selection, proof of concept, then implementation, with us sitting on your side of the table throughout. You can bring us in part way, for a second opinion on an option appraisal already underway or a review of your requirements before they go to market. We don't bid for the build that follows our advice.

Technology adoption

ASSET OWNERS · INNOVATION LEADS · HEADS OF ENGINEERING

Getting proven technology accepted into service, where the parts are mature and the combination is not. Standards and product acceptance, the maintenance regime, competence, and who carries the budget once the trial funding stops. For a successful trial with no route into business as usual, or an innovation fund approaching its end. It starts with a readiness assessment of whether your estate can absorb it.

WHO YOU'LL SPEAK TO

Senior industry practitioners, led by Mike Brown CEng MICE, co-founder & COO, with experience leading national programmes and asset management change from the client side at Network Rail. Mike led Network Rail's Intelligent Infrastructure Civils programme and the closure of the £327m ORBIS Programme.

WHERE WE'VE DONE IT

Citadel and NEST for Network Rail. NEST won Best Public Sector Digital Project at the 2025 Digital Tech Leaders Awards. Citadel won Digital Transformation Project of the Year, Best Use of Technology for Digital Engineering at NCE TechFest, and Innovation of the Year at the UK IT Industry Awards. Also an earthworks monitoring pilot and whole system modelling.

HOW TO BUY

Fixed price and flexible options for every service. Public sector clients can appoint us through the SparkDPS, AIDPS and SpaceDM frameworks.
Accreditations: Cyber Essentials, RISQS, JOSCAR.
